Objective

Aspiring Embedded Systems Engineer with knowledge of C programming, C ++ and currently learning Embedded C. Passionate about embedded systems, Linux, and software development. Looking for an opportunity to gain practical experience and grow in the embedded domain.

Education

- **Jain institute of technology** 2025
  Electrical and Electronics engineering
  8.29
- **STJ polytechnic** 2021
  Diploma Electrical and Electronics engineering
  65%
- **LHS High school** 2018
  SSLC
  72%

Skills

- C Programming
- C++
- Linux (learning)

Projects

- **Inverted Search**
  Designed and implemented an inverted index in C to enable fast full-text search over a document collection, mapping each unique word to the list of documents/positions where it appears
- **APC (Arbitrary-Precision calculateor)**
  Developed an arbitrary-precision arithmetic system in C to perform calculations beyond standard int/float limits, avoiding overflow and rounding errors inherent to fixed-width types
- **Steganography**
  Developed a Steganography application in C to hide and extract secret data inside image files using file handling and bit manipulation techniques. Implemented encoding and decoding functionalities for secure data transfer.
- **MP3 Tag reader**
  Developed an MP3 Tag Reader application in C to read and display MP3 metadata such as song name, artist, album, and genre using file handling and string manipulation concepts.
- **Addressbook**
  Developed an Address Book application in C to add, search, edit, delete, and display contacts using file handling and structures.

Academic Projects

- **ECG heart monitoring system**
  I Developed an ECG Heart Monitoring System to monitor and analyze heart signals for detecting abnormal heart activity. Worked with sensor interfacing, signal processing, and embedded system concepts for real-time health monitoring.
- **Automated Paralysis Patient Health Care System**
  I Developed an automated health monitoring system for paralysis patients to track vital parameters and assist in patient monitoring using embedded system and sensor interfacing concepts.
